Art Unit: 1714

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 7, 8, 10 and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by Aasen et al.

Aasen et al disclose kits comprising materials for adhering to hard tissue. The materials taught include a polymer such as claimed instantly and an adhesive (claim 56 and column 5, lines 53-64).

Therefore the reference anticipates the rejected claims.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Aasen et al in view of Ibsen et al.

Aasen et al disclose kits directed toward adhesion to hard tissue as discussed above. This reference lacks an explicit recitation of applicants preferred adhesives and separate containers for the two components.

The reference to Ibsen et al disclose adhesives suitable for dental applications which comprise polymers with vinyl groups (see abstract).

Regarding the use of separate containers, this is seen as an obvious expedient in preparing a kit with two distinct components.

Therefore, it would have been obvious to select adhesives for dental applications as taught by the secondary reference and to package the two separate components of the kit in separate containers.

Claims 2-6, 11, 12, 14 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 16-21 and 24-25 are allowed.
